Good morning all. Thanks for the info on software compatibility. We are currently looking for options on increasing our overall wireless network capacity. As is the case with other wireless carriers we are getting beat up pretty bad on utilization.

I would like to utilize as much of our existing infrastructure as we can so I can get good "bang for my buck". I've included our most recent sector configuration so you can see where things are pointed now. I'm thinking shrinking the coverage area per cell on our AWS network is the right way to go. One of the things I'm looking at is adding an additional location to Kendallville, IN on the east side of town. I'd like to use remote RRU from existing eNodeB's when we can.

Guys,

Ligtel is looking to do capacity upgrade on their network….Josh (cc'd on this email) will provide details in a follow up email.

First question…can we do capacity upgrades on current releases? Don't think this is an issue but want to confirm.
